

# Mouldings & Frames Terminology & Pricing

We have put together a wooden moulding line that is centred around the well known **Sun Set** line of mouldings made in Canada. If you would like a **Sun Set** moulding not shown in our catalogue, we would be pleased to special order it for you. In addition we have mouldings from other manufacturers that we feel fit into our quality line.

Most wood mouldings may differ from one batch to the next due to the hand work in the finishing process and the natural features of wood. Because of the natural variations in wood, be sure to check each stick to ensure it will satisfactorily match up with moulding cut from another stick. Our suppliers do their utmost to duplicate the moulding from one run to the next, but variations from one shipment to the next do occur.

## Moulding Terminology

The moulding diagram to the right will help you to understand the terms used to describe wooden mouldings.

## Chop & Join Frames

If you want to use our chop or chop-and-join service there is a chart on Pages 21 to 23 pricing the various mouldings. First look in the price list to determine the chop code and then use the chart to determine wholesale chop cost for the frame size. Then proceed to add the join charge for the appropriate united inch size range of frame. The chart is made for measuring in UNITED INCHES, which is the WIDTH plus LENGTH of a frame.

If you want to buy moulding footage, there is a footage chart on the next page showing how many feet of moulding you require for a frame depending of the width of the moulding. Please phone us for a quotation on volume chop or chop and joined frames.

## Chop Frames

To determine the price for a frame that is just chopped (not joined) simply use the price list to determine the chop code and then use the chop chart on Pages 21 to 23 to determine the wholesale cost of the frame.

# Mouldings & Frames Estimating Footage

## Footage Chart

The chart below has been prepared to help the framer determine the amount of moulding required for a frame job. For a width or United Inch measurement not listed you can use the formula below to calculate the footage of moulding required.

$$\text{Moulding Required} = \frac{(2) \times (X) + (12) \times (W)}{12"} = \text{footage in feet}$$

Where X = the United Inches of the frame

Where W = the width in inches of the moulding including the rabbet

## L-Mouldings

The modern look for framing canvas! The canvas is fastened to the back lip of the moulding, leaving the appearance of it floating within the frame. The black of the back and sides provides a contrast to the face of the moulding, expressing the reverse of the light linen liner/dark frame concept. For the best look, stretch and staple the canvas to the back of the stretcher frame or wrap the edges in Black Linen Tape (see Page 6, Section E - Tapes and Adhesives).

Available in Soft Gold, Silver, Satin Black and Gold.

Profile A306 has an overall depth of 1 1/2", with 1" of depth for artwork. Profile A304 is 2 1/4" deep, space for the artwork is 1 7/8".
